This press release may contain forward-looking information based on current information and expectations of the Company that involve a number of risk, uncertainties, and assumptions. Among the factors that could cause the actual results to differ materially are industry conditions, prices of crude oil and gas, the Company's ability to obtain and the timing of new project, and changes in competitive factor. Should one or more of these risk or uncertainties materialize, or should the underlying assumption prove incorrect, actual outcomes could vary materially from those indicated

## **PGN Targets Gas Sales Volume of 877 BBTUD as Demand Expected to Grow**

Jakarta – PT Perusahaan Gas Negara (Persero) Tbk (PGN) as Pertamina's Gas Subholding is committed to continuing the implementation of strategic natural gas projects. The sustainability of strategic pipeline and non-pipeline infrastructure projects plays a fundamental role for PGN amidst the demands of energy resilience and transition.

In 2026, PGN targets the distribution of natural gas to various customer segments at around 877 BBTUD, growing by 4%. This is driven by optimism regarding demand growth from several industrial areas and new customers, particularly in East Java and Central Java. PGN will also complement its natural gas services with LNG distribution. This optimism is what drives PGN to strengthen its operations as the main foundation.

"The focus of PGN in 2026 is on strengthening operations as a long-term investment to ensure service reliability for customers. PGN also has high hopes of connecting natural gas to communities in various sectors and economic centers," explained PGN Corporate Secretary Fajriyah Usman.

PGN's main strategic project is the acceleration of several initiatives to strengthen transmission, distribution, and regasification infrastructure. This development direction includes expanding service coverage thru customer attachment targeting the commercial and industrial sectors across various scales of business. PGN is also completing infrastructure projects such as the Cikampek - Plumpang Pipeline, plans for additional Sei Mangkei Distribution Pipeline routes, and the development of LNG storage and regasification facilities.

Then, in an effort to expand energy access to households, PGN is accelerating the household gas network (jargas) in Sumatra and Java. This step is accompanied by midstream infrastructure innovations thru beyond-pipeline modes such as CNG cylinders, LNG Hub retail, trucking, and Vertical Gas Liquid (VGL) tanks.

Completing this innovation, PGN strengthened LNG infrastructure thru the optimization of the Hub & Storage Arun facility, which is now equipped with top-notch security features and the expansion of LNG facility development to eastern

# PRESS RELEASE

Date : March 11<sup>th</sup> 2026
