PRESS RELEASE

PERTAMINA GAS NEGARA

Date : **2026, October 16**

Corporate Secretary : Fajriyah Usman (**T** : +62 858-8330-8686, **E** : fajriyah.usman@pertamina.com)

This press release may contain forward-looking information based on current information and expectations of the Company that involve a number of risk, uncertainties, and assumptions. Among the factors that could cause the actual results to differ materially are industry conditions, prices of crude oil and gas, the Company's ability to obtain and the timing of new project, and changes in competitive factor. Should one or more of these risk or uncertainties materialize, or should the underlying assumption prove incorrect, actual outcomes could vary materially from those indicated

PGN Strengthens Business Efficiency and Competitiveness Through Sustainable Decarbonization Initiatives

Jakarta – PT Perusahaan Gas Negara (Persero) Tbk (PGN), as the Gas Subholding of Pertamina, continues to strengthen the implementation of decarbonization as part of its sustainable business strategy. As of August 2026, the Gas Subholding recorded an emission reduction of 29,574.87 tons of CO_2 equivalent (tCO_2eq), or 35.3% above the target set for the period.

This achievement reflects a positive trend in the implementation of decarbonization programs across the Gas Subholding Group, while serving as a foundation for the company to reinforce emission reduction initiatives for the 2027–2030 period.

Mirza Mahendra, Director of Strategy and Business Development at PGN, stated that decarbonization has become an integral part of the company's business strategy, not only supporting emission reduction but also enhancing operational efficiency, maintaining competitiveness, and mitigating evolving climate and regulatory risks.

"The emission reduction achieved as of August 2026 demonstrates that the various decarbonization initiatives undertaken by the Gas Subholding are yielding positive results. For PGN, decarbonization is not merely about fulfilling environmental commitments, it is a business strategy aimed at boosting efficiency, bolstering competitiveness, and creating long-term value for the company," Mirza said.

In line with this milestone, PGN continues to strengthen decarbonization programs across the Gas Subholding Group through key initiatives, including energy efficiency enhancements in operational facilities, reduction of gas loss, and optimization of lower-emission energy sources.

These initiatives are designed to improve the management efficiency of natural gas infrastructure and operations, while supporting the government's commitment to achieving Net Zero Emissions (NZE) by 2060 or sooner.

Accumulatively from 2025 through August 2026, the Gas Subholding's total emission reduction reached over 68,500 tCO_2eq, representing approximately 15.7% of the company's cumulative decarbonization target through 2034.

Beyond environmental benefits, decarbonization also generates economic value for the company. Based on decarbonization program evaluations, the Marginal Abatement Cost

This press release may contain forward-looking information based on current information and expectations of the Company that involve a number of risk, uncertainties, and assumptions. Among the factors that could cause the actual results to differ materially are industry conditions, prices of crude oil and gas, the Company's ability to obtain and the timing of new project, and changes in competitive factor. Should one or more of these risk or uncertainties materialize, or should the underlying assumption prove incorrect, actual outcomes could vary materially from those indicated

(MAC) was recorded at -0.19 thousand USD/tCO_2eq. This negative value indicates that the portfolio of emission reduction initiatives generates cost savings alongside environmental benefits.

“Through energy efficiency programs and operational optimizations, we aim to ensure that the emission reduction agenda aligns with increased productivity and cost efficiency. Consequently, decarbonization not only delivers environmental benefits but also reinforces the company's business fundamentals,” Mirza explained.

To sustain these achievements, PGN hosted the Gas Subholding Decarbonization Workshop 2027–2030 on October 7, 2026, in Jakarta. The event brought together representatives from PGN and its Gas Subholding Group entities, including PT Pertamina Gas, PT Perta Arun Gas, PT Saka Energi Indonesia, PT Permata Graha Nusantara, PT PGN LNG Indonesia, PT PGAS Solution, PT PGAS Telekomunikasi Nusantara, and PT Gagas Energi Indonesia, to draft an integrated emission reduction plan aligned with the Company’s Long-Term Plan (RJPP) 2027–2030.

The formulation of these initiatives also refers to the Gas Subholding ESG Roadmap 2025–2034 as the overarching framework for corporate sustainability implementation. Proposed programs will subsequently be finalized and presented to management to ensure measurable, integrated, and sustainable execution.

Mirza emphasized that the active involvement of all Gas Subholding Group entities is crucial to ensuring consistent implementation and delivering tangible impacts on corporate performance.

“Decarbonization is no longer just about lowering emissions, it is a core business strategy to preserve efficiency and competitiveness, mitigate climate and regulatory risks, and meet the expectations of investors, customers, and the public. Through the collaboration of all Gas Subholding Group entities, we are committed to strengthening measurable and sustainable decarbonization initiatives,” Mirza concluded.
